

There are 4 types of modes in the Biomedis Trinity device:

In Modes 1 and 2, the device operates according to the method of BRT and programs are aimed to correct and prevent specific pathologies. Preventative and supportive programs are made individually for each person.

Purpose of the programs for the modes-1 or 2:

1. Strengthening of the body functions and systems (musculoskeletal, nervous, integument, cardiovascular, respiratory, digestive, urinary, immune, endocrine, reproductive);
2. Prevention of premature aging;
3. Ensuring infectious safety;
4. Body cleansing and elimination of toxic substances.

In Mode 2, the BRT method is implemented through the multi-frequency synchronization technology (MFS). In this mode the impact on the body occurs not only through a network of blood vessels, nerve fibers, and biologically active points on the skin surface, but also through the water matrix and on the cellular and intracellular levels. As a result, the effectiveness of BRT increases significantly. Due to the simultaneous operation of the three emitters in the device, the healthy vibration frequencies enter the body on the three levels! They resonate with the whole structures of an organism and stimulate it to work for self-healing.

In Modes 3 and 4 the device implements Transcranial Magnetic Stimulation, Structural Resonance Therapy and Psychosomatic Pathology Correction Method through the MFS technologies.

In Mode 3, the basal rhythms of the organism are affected. Basal rhythms are initial, basic, deep rhythms of a human, developed in the course of evolution. In a state of health, they are clearly defined and synchronized with each other. Because of the fractal interrelation between the modulation frequencies and inter-synchronization of these rhythms on all functional-hierarchical levels of an organism, the basal rhythms return to the state of health. Complexes in Mode 3 are used as a mono correction for any deviations in the body and as disease prevention. They are also used in conjunction with the complexes in Modes 1 and 2.

In Mode 4, the brain rhythms are synchronized. The modulation frequencies are correlated with the brain rhythms. The multichannel effect of the device uses the same principle that the brain itself uses to maintain

homeostasis. During therapy the ancient structures of the human brain, which is responsible for managing the reserve and hidden capabilities of the body get stimulated and balanced.

Mode 4 is effective for achieving the following effects:

- Stress reduction, fast relaxation, fatigue relief;
- Memory improvement;
- Learning process and creativity support;
- Used in complex therapy for ADD and ADHD attention deficit disorder;
- Sleep normalization;
- Recovery processes activation;
- Chronic pain reduction;
- Metro sensitivity reduction, jet lag prevention;
- Physical working capacity improvement;
- Brain and body concentration and mobilization;
- Mood and well-being improvement;
- Psycho-traumatic situations correction;
- Alcohol and drug dependency recovery;
- Anxiety decrease;
- Autonomic nervous system support;
- Brain and body hidden reserves and possibilities activation.

The regular use of the psychosomatic complexes in Mode 4

INFORMATION GUIDANCE

FOR BIOMEDIS TRINITY

3

calms the mind and body, and synchronizes them to work as one unit. Mode 4 complexes are recommended to use before using any other mode as an activator of the body reaction to the exogenous electromagnetic field.

In Modes 3 and 4, as well as in Mode 2, there are three emitters, which affect the whole body on three levels:

- through the blood vessels, nerve fibers, biologically active points;
- through the water matrix;
- on the cellular and intracellular levels.

Scanning Technology

When the complex is set on for Modes 2, 3 and 4, TRINITY scans the body first and identifies the resonance absorption frequencies of the organism. Scanning technology lets the device adjust its frequencies in such way that the body absorbs them better. Our body's frequencies constantly change their values; therefore, TRINITY

constantly adapts to these changes and maintains an adequate frequency of influence. Due to this, the corrective frequencies penetrate the body without hindrance, and more efficiently.

When starting any complex in the modes 2, 3, 4, turn the device with its backside to body and hold it at a distance of 20-30 cm (8-12inches) for 7-8 seconds. During this time, the activation of scanning technology takes place.

The radius of effective influence

When using the device in Mode 1, it can be placed directly next to the body (in the pocket) or at distance up to 1 meter (around 3 feet). It is desirable to place the device with its backside towards the body, otherwise, the efficiency is reduced.

When using the device in Modes 2, 3 and 4, it should always be put with its backside toward the person.

In Modes 2 and 3, the effective radius of influence is 20 - 50 cm (about 8-20 inches). If the distance is less than 20 cm or more than 50 cm, the efficiency is reduced.

When using in Mode 4, the effective radius of influence is 20-30 cm (about 8-12 inches).

If the distance is less than 20 cm or more than 30 cm, the efficiency is reduced.

Duration and frequency of the session

A session is a one-time impact of a specific set of programs.

If it is necessary, you can have several sessions a day. To obtain the desired results, you need to do a course of sessions. The average course of the therapy is 14-21 days. It is desirable to take a break for a few days between courses. When using Biomedis Trinity, it is recommended to look into the individual characteristics of organism and particular systems before choosing programs.

Precautions when using BIOMEDIS TRINITY

The device is contraindicated in the presence of an implantable pacemaker. People under the influence of alcohol and/or psychoactive drugs should not use the device.
